Digital Radio Mondiale™ (DRM) and Radio Republik Indonesia (RRI) to Trial DRM Digital Radio in Indonesia

The Digital Radio Mondiale (DRM) Consortium and the Indonesian public broadcaster, Radio Republik Indonesia (RRI), are pleased to announce a DRM30 digital radio trial and workshop in Jakarta, Indonesia in the week of 24th of March. RRI is exploring ways of covering this large and diverse country aiming to provide quality broadcasting services that can be received countrywide, with the efficient use of energy.

The DRM30 trial and workshop will be held in Bogor from 24th - 27th March 2015. **The actual demonstration on the MW transmitter (1242 kHz) with a power of 6.5 kW will take place on Wednesday 25th March from 0900-1700 local time**. The demo will be conducted by RRI and key Consortium members: Fraunhofer IIS, GatesAir, RFmondial and Transradio. During the workshop attendees will be invited to observe the results of the DRM30 trial and to learn more about the full DRM standard.

About DRM

Digital Radio Mondiale™ (DRM) is the universal, openly standardised digital broadcasting system for all broadcasting frequencies.

The DRM standard comprises of two major configurations: 'DRM30' intended for broadcasts on short, medium and long wave up to 30 MHz and providing large coverage areas and low power consumption. The configuration for the VHF bands above 30 MHz is called 'DRM+', tailored for local and regional coverage with broadcaster-controlled transmissions.

All DRM configurations share the same audio coding, data and multimedia services, service linking, multiplexing and signalling schemes.

DRM provides high quality sound combined with a wealth of enhanced features: Surround Sound, Journaline text information, Slideshow, EPG, and data services.

For more information and DRM updates please visit www.drm.org or subscribe to DRM news by writing to pressoffice@drm.org.
